

## RB28 VS. RB35

RB28 (93-1010) is designed to work with Black Twister 150 RPM

RB35 (93-1045) works only with the Carbide Twister 350 RPM

If customer wishes to use Carbide Bits with the RB28, please note that the RPM needs to be higher. Please adjust throttle spring accordingly (See below images)

Note, the RB35 drill runs at 350 RPM for optimal use of the carbide twister bits. The RB28 runs at 150 RPM with Black Twister Bits, if you move the throttle spring your drill will run at 230 RPM.

We recommend using the proper twister bits with the correct drill for optimal lifespan of your cutters.
